

Amendments to the Specification:

On page 35, the first full paragraph is amended as follows:

The embodiments of the invention are preferably implemented using a computer, such as the general-purpose computer shown in Figure 11. In particular, the functionality or processing by the system described with reference to Figures 1 to 10 may be implemented as software, or a computer program, executing on the computer. The system for video production is a computer arranged to run a program. ~~The and~~ method for video production ~~is are~~ effected by instructions in the software that are carried out by the computer. The software may be implemented as one or more modules for implementing the process steps. A module is a part of a computer program that usually performs a particular function or related functions. Also, as described in the foregoing, a module can also be a packaged functional hardware unit for use with other components or modules.

On page 36, the 2nd paragraph is amended as follows:

In some instances, the program may be supplied to the user encoded on a CD-ROM or a floppy disk (both generally depicted by block 29), or alternatively could be read by the user from the network via a modem device connected to the computer, for example. Still further, the software can also be loaded into the computer system 28 from another computer readable medium on which the data is stored, including magnetic tape, a ROM or integrated circuit, a magneto-optical disk, the data storage medium of another device which is arranged to transmit the program to the user's computer over a radio or infra-red transmission channel ~~between the computer and another device,~~ a computer readable card such as a PCMCIA card, the data storage device of a server supporting a website connected to and the Internet and an Intranets, and the data storage device of a server supporting an email transmission over the Internet or Intranet ~~including email transmissions and information recorded on websites and the like.~~ The foregoing is merely exemplary of relevant computer readable mediums. Other computer readable mediums may be practiced without departing from the scope and spirit of the invention.
